Module 8 Chaps1 - Food and Agriculture Organization

Drip irrigation is adaptable to any farmable slope. Normally the crop would be planted along contour lines and the water supply pipes (laterals) would be laid along the contour also. This is done to minimize changes in emitter discharge as a result of land elevation changes.

NORMS FOR THE DESIGN OF IRRIGATION SYSTEMS

Drip irrigation is an ideal solution for irregular or small areas. Inline drip irrigation limits the potential for liability by reducing or eliminating overspray on buildings, walkways, roadways, and other trafficked areas. Main-tenance costs are often

lower due to reduced overspray, runoff, erosion, compaction, water staining, and property damage.

Manual Irrigation | SSWM - Find tools for sustainable ...

A common and very simple technique for manual irrigation is for instance the use of watering cans as it can be found in peri-urban agriculture around large cities in some African countries. A more sophisticated and very water-efficient type of manual irrigation system is small-scale drip irrigation with buckets (see also drip irrigation ...
