Article - Sinonasal neoplasms: Update on classification ...

Squamous carcinoma, which is the most common type of malignant tumor in the

paranasal sinuses. Salivary gland cancers, occurring in the sinonasal cavity. These cancers include adenocarcinoma, mucoepidermoid carcinoma and adenoid cystic carcinoma. Esthesioneuroblastoma, a common cancer of the nasal cavity.

Sinonasal Tumors

SNUC is a rare and aggressive type of cancer originating in the epithelial layer of the nasal cavity or paranasal sinuses. It was first diagnosed in 1987. The aggressive nature of the cancer coupled with the advanced stage of disease upon presentation lead to a poor survival rate.

Imaging Review of New and Emerging Sinonasal Tumors and ...

A relative survival rate compares people with the same type and stage of cancer to people in the overall population. For example, if the 5-year relative survival rate for a specific stage of nasal cavity or paranasal sinus cancer is 80%, it means that people who have that cancer are, on average, about 80% as likely as people who don't have that cancer to live for at least 5 years after being diagnosed.

Paranasal Sinus and Nasal Cavity (Sinonasal) Tumors

Esthesioneuroblastoma (ENB) is a rare neuroendocrine tumor that arises from the neural cells of the olfactory mucosa. ENB accounts for 3% of SN tumors. 31 A slight male predominance has been reported and there are no known risk factors. 31 There is a bimodal age distribution for this tumor.

Sinonasal Tumors - Cleveland Clinic

Tests and procedures used to diagnose nasal and paranasal tumors include: Using an endoscopic camera to see inside your nasal cavity and sinuses. During a nasal endoscopy, a thin tube with a light and camera on the end is inserted into your nose. The camera sends pictures to a monitor that your doctor uses to look for anything unusual.

Sinonasal Undifferentiated Carcinoma - NORD (National ...

In most cases, nasal cavity and paranasal sinus cancers are found because of problems they cause. Diagnosis in people without symptoms is rare and usually accidental (found while doing tests to check for other medical problems). Possible symptoms of these cancers (often only on one side) include:
